

Press release

LEUKOCARE launches new website

LEUKOCARE is pleased to announce the launch of its new website www.leukocare.com in March 2014. Visitors are invited to explore the fully- featured website that has been designed to provide the ultimate user-friendly experience. It offers improved navigation and functionality allowing customers richer insights into the company's Stabilizing and Protecting Solutions (SPS) technology platform and related applications.

Munich, Germany, 27 March 2014

LEUKOCARE provides a next-generation formulation platform for the protection of biologics to allow the development of better products. The proprietary Stabilizing and Protecting Solutions (SPS) technology is provided to development projects of partners in the pharmaceutical and medical device industry. As different stakeholders have different needs the new tile based design of LEUKOCARE's website provides an instant overview of the versatile SPS technology. Direct entry points guide visitors to desired information, e.g. about the three main pillars of the platform: improvement of thermal stability, protection during sterilization and functionalization of medical devices. The therapeutic areas of vaccines as well as therapeutic antibodies and biosimilars can be accessed directly.

"As our clients are usually challenged by complex questions in product development and the need for specific solutions it is important that our website guides visitors intuitively to the appropriate information", commented Roland Derwand, Vice President Scientific Medical Marketing & Sales.

Indeed the responsive website design allows easy browsing and a quick overview of the various fields of applications. "LEUKOCARE offers next-generation formulation technologies and from a corporate perspective our innovative approach is also reflected in our communication efforts to provide focused and relevant information to our customers in the healthcare industry", added Michael Scholl, Chief Executive Officer of LEUKOCARE.

About LEUKOCARE

LEUKOCARE is a leading provider of technologies for stabilisation and protection of proteins to extend shelf life and to enable terminal sterilization. With LEUKOCARE technologies, biopharmaceutical products and vaccines can be significantly improved in respect to storage stability and quality. Moreover, a wide variety of surfaces can be functionalised by biologically active substrates, including implant surfaces, wound dressings, stents, catheters and others. LEUKOCARE provides proprietary and patented formulation technologies for stabilization and protection of biologics to partners in the fields of biopharmaceuticals, vaccines and combination devices. Beyond that, LEUKOCARE offers related development services in the course of the technology implementation process.

LEUKOCARE leverages its comprehensive expertise in product-focused industrial partnerships. LEUKOCARE's technologies are currently employed in more than 15 collaborative development projects with industrial partners. LEUKOCARE was founded in 2003 and is headquartered in Martinsried near Munich, Germany.
